SUMMARY

Fraud Analyst with 2+ years of experience in account-takeover investigation, SQL transaction analysis, and security workflow automation. Resolved 5,000+ fraud incidents at a verified 97% quality rating and built 7–10 Python and Cortex XSOAR automation workflows. Master's candidate in AI and Machine Learning Engineering.

WORK EXPERIENCE

Fraud Analyst | Equifax — Global Security July 2025 – Present

- Orchestrate **7–10 workflows** in Python, Cortex XSOAR, and Salesforce to flag suspicious patterns and block fraud
- Streamline recurring reporting and data processing, reclaiming **250 minutes weekly** (about **217 hours** annually)
- Visualize fraud-risk metrics, security trends, and incident response across **2 Tableau dashboards**
- Triage alerts in Cortex XSOAR, reviewing incident details to guide response
- Engineer SQL queries with CTEs and window functions to isolate account-takeover patterns
- Analyze security logs and transaction records in Python to surface unusual activity and fraud indicators
- Train **2 analysts** (1 new hire, 1 senior employee, UK tenant) on security procedures and casework

Fraud Analyst | TTEC — Airbnb February 2024 – July 2025

- Resolved **5,000+ fraud incidents** in 18 months (**275+ per month**) at a verified **97% quality rating**
- Restored access to **500+ compromised customer accounts** (roughly 1 in 10 incidents) via account-takeover investigations
- Extracted historical transaction data via SQL to identify behavioural anomalies
- Traced suspicious account activity in Fraud Trace and Activity Log, linking related events across accounts
- Coached **3 batches** (2 new-hire, 1 tenured) on the Payout Defense Queue (PDQ) to build process knowledge and consistency

PROJECTS

Netflix Content Strategy Case Study | Python, Pandas

- Cleaned a catalog of **8,807 titles** (6,131 movies, 2,676 TV shows) using vectorized Pandas operations for missing-value imputation and datetime extraction
- Exploded multi-value fields (cast, country, genre) to compute category frequencies across the full catalog
- Determined that movies made up **69.6%** of catalog volume, with TV-MA and TV-14 the dominant ratings
- Identified a **90- to 110-minute** movie runtime concentration via histograms; recommended shifting **15%** of feature acquisition budget to multi-season TV

Aerofit Treadmill Customer Profiling | Python, Seaborn

- Validated **180 customer records** (100% complete) and optimized categorical transformations to cut memory use
- Built probability matrices and two-way contingency tables (pd.crosstab) to compute marginal and conditional purchase probabilities across 3 product tiers
- Applied Interquartile Range (IQR) outlier detection, retaining high-income customers (**$85,000–$104,000+**) to model premium buyers accurately
- Segmented buyers into **3 personas**; found the $1,500 entry model drove **44.4%** of units (80 of 180), while **$60,000+** earners running **150+** weekly miles favored the **$2,500** model

EDUCATION

Masters in Artificial Intelligence and Machine Learning Engineering
Woolf University, Online, USA | GPA 3.5 | November 2025 – Present

Bachelor of Mechanical Engineering
Sri Chandrasekharendra Saraswathi Viswa Mahavidyalaya, India | GPA 9.18/10 | April 2021

SKILLS

Programming and Databases: Python (NumPy, Pandas, Seaborn, Matplotlib, object-oriented programming), SQL, LINQ-SQL, C++, Java (beginner)

Data Visualization and Statistics: Tableau, Power BI, Excel, Google Sheets; probability and statistics, probability distributions, hypothesis testing, regression analysis

Security and Fraud: Cortex XSOAR, Salesforce integration, SIEM, security log analysis, fraud detection, transaction monitoring

CERTIFICATIONS

SQL Intermediate, HackerRank; Cyber Security and Malware Analysis workshop, Indian Servers
